# Max Cut

## Introduction

### • Max Cut

An application in  
statistical physics

The Goemans and  
Williamson algorithm

Bibliography

Given a graph  $G(V, E)$ ,  $|V| = n$  with weights  $w_{ij}$  for all  $(i, j) \in E$   find  $S \subseteq V$  such that the cut  $S, V \setminus S$  is maximum.

Introducing the variables:

$$x_i = \begin{cases} 1 & \text{if } i \in S \\ -1 & \text{if } i \in V \setminus S \end{cases}$$

# Max Cut

## Introduction

### • Max Cut

An application in  
statistical physics

The Goemans and  
Williamson algorithm

Bibliography

Given a graph  $G(V, E)$ ,  $|V| = n$  with weights  $w_{ij}$  for all  $(i, j) \in E$   find  $S \subseteq V$  such that the cut  $S, V \setminus S$  is maximum.

Introducing the variables:

$$x_i = \begin{cases} 1 & \text{if } i \in S \\ -1 & \text{if } i \in V \setminus S \end{cases}$$

The max cut problem can be expressed as

$$\begin{aligned} \max & \frac{1}{2} \sum_{i < j} w_{ij} (1 - x_i x_j) \\ & x_i^2 = 1 \quad i = 1, \dots, n \end{aligned} \tag{MC}$$

# Max Cut

## Introduction

### • Max Cut

An application in  
statistical physics

The Goemans and  
Williamson algorithm

Bibliography

Given a graph  $G(V, E)$ ,  $|V| = n$  with weights  $w_{ij}$  for all  $(i, j) \in E$  find  $S \subseteq V$  such that the cut  $S, V \setminus S$  is maximum.

Introducing the variables:

$$x_i = \begin{cases} 1 & \text{if } i \in S \\ -1 & \text{if } i \in V \setminus S \end{cases}$$

The max cut problem can be expressed as

$$\begin{aligned} \max & \frac{1}{2} \sum_{i < j} w_{ij} (1 - x_i x_j) \\ & x_i^2 = 1 \quad i = 1, \dots, n \end{aligned} \tag{MC}$$

It can be rewritten as

$$\begin{aligned} \max & x^T C x \\ & x_i^2 = 1 \quad i = 1, \dots, n \end{aligned} \tag{MC}$$

where  $C = \frac{1}{4} (\text{Diag}(We) - W) = \frac{1}{4} L$  ( $L$  is the Laplacian of the graph)

For each pair  $i, j$  of atoms there is an interaction  $J_{ij}$  depending on the material and on the distance (decreases quickly with the distance), an example is

$$J_{ij} = A \frac{\cos(Dr_{ij})}{B^3 r_{ij}^3}, \quad A, B, D \text{ depending on the material}$$

If atom  $i$  and  $j$  have spins  $S_i$  and  $S_j$ , the energy interaction between the two atoms is given by

$$H_{ij} = J_{ij} \langle S_i, S_j \rangle$$

Given a configuration  $\omega$ , the energy of the system is given by the hamiltonian

$$H(\omega) = - \sum_{i=1}^{n-1} \sum_{j=i+1}^n J_{ij} \langle S_i, S_j \rangle - h \sum_{i=1}^n J_{ij} \langle S_i, F \rangle$$

where  $F \in \mathbb{R}^3$ ,  $\|F\| = 1$  represents the orientation of an exterior magnetic field of strength  $h$ .

$$\begin{aligned} x_i & \Rightarrow v_i \in \mathbb{R}^k, k \leq n \\ x_i^2 = 1 & \Rightarrow \|v_i\| = 1 \end{aligned}$$

$v_i$  is the relaxation of  $x_i \in \{-1, 1\}$  to the  $n$ -dimensional unit sphere. We get the problem

$$\begin{aligned} & \max \sum_{i,j} \sum_{i < j} w_{ij} (1 - v_i^T v_j) \\ & \|v_i\|^2 = 1 \quad i = 1, \dots, n, v_i \in \mathbb{R}^n \end{aligned}$$

(the same as  $X = VV^T$ )

The max cut problem can be rewritten as

$$\begin{aligned} \max \quad & \frac{2}{\pi} \langle C, \arcsin(X) \rangle \\ \text{diag}(X) &= e \\ X &\succeq 0 \end{aligned}$$

Sketch of the proof: Choose  $V = X^{\frac{1}{2}}$ . Then we need to prove

$$E_u(\langle C \sigma(Vu), \sigma(Vu) \rangle) = \frac{2}{\pi} \langle C, \arcsin(X) \rangle$$

Bibliography

If  $C \succeq 0$ , then

$$\frac{z_{MC}^*}{z_{MC}^* - z_{SDP}^*} > \frac{2}{\pi} = 0.6366$$

Define  $X^{\circ k} = X \circ X^{\circ(k-1)}$  and consider that

$$\arcsin(X) = X + \frac{1}{2} \frac{X^{\circ 3}}{3} + \frac{1 \cdot 3}{2 \cdot 4} \frac{X^{\circ 5}}{5} + \dots$$

and  $-1 \leq X_{ij} \leq 1$  then  $\arcsin(X) - X \succeq 0$ . Since  $C \succeq 0$ , we get

$$\frac{2}{\pi} \langle C, \arcsin(X) - X \rangle \geq 0$$

and hence

$$z_{MC}^* \geq \frac{2}{\pi} \langle C, \arcsin(X) \rangle \geq \frac{2}{\pi} \langle C, X \rangle = \frac{2}{\pi} z_{SDP}^* \geq \frac{2}{\pi} z_{MC}^*.$$
